CASSETTE

Do battle with the Empire's ultimate fighting machines: Terrorpods.

Take energy and fuel from mining installations to keep your Defence Strategy Vehicle up and running as you travel across the surface of a hostile asteroid. Dodge or destroy homing missiles that arrive from the skies, eliminate the Terrorpods on each successive level and collect Terrorpod components so that the secret of their manufacture may be revealed.

The 8-bit version of a classic 16-bit that they said could never be programmed. It has, here it is. Play it.
